3. What employees are saying about benefits options
4. About the study
Portrait of the U.S. workforce

The economy has improved, unemployment levels have fallen, and it’s increasingly easier to discretely look for a job online and through social networking. Employees indicate in the 2016 Aflac WorkForces Report that their employers can expect a certain amount of turnover – especially as more millennials and their protégés, Generation Z, enter the workforce. Nearly half of all employees (47 percent) are likely to look for a new job in the next 12 months; 31 percent are extremely or very likely.

The job search is on

How likely are you to look for a new job in the next 12 months?

Health and wealth are top of mind for U.S. employees

New Year’s resolutions are infamously centered on weight loss goals, but employees admit they have another pressing issue on their minds – their wallets. “Manage my finances better” was the most frequently named 2016 New Year’s resolution after “eat healthier” and “exercise more frequently.” And if they had a little extra cash, employees most often said they’d use it to pay bills or reduce debt, instead of spending it on family outings, date nights or sporting events.

Many employees would use extra cash to pay for essentials

If you had an extra $132 in your pocket to spend on one of these activities, how would you spend it?

- Paying monthly bills: 34%
- Reducing debt: 7%
- Family outing: 9%
- Maintaining health care benefits: 5%
- Shopping for clothes or shoes: 4%
- Spa treatment: 4%
- Date night: 13%
- Sports event: 24%

What's the significance of $132? The average family spent $132 more on their health insurance benefits from 2014 to 2015.2,4
Health care costs top benefits concerns

Even though rate increases for health insurance premiums have slowed compared to 10 or 15 years ago, they are still outpacing inflation and workers’ wages. The Aflac study found that employees are well aware of the continued drain on their wallets. In fact, far more than half (60 percent) said the top issues concerning them are increasing out-of-pocket medical expenses or the increasing cost of major medical or health insurance over maintaining their health benefits or the possibility of their employer eliminating spouse coverage. Fully 1 in 4 (25 percent) has had difficulty paying a medical bill due to high medical costs, and the majority (81 percent) believe the medical costs they are responsible for will increase.

While most individuals are now required to have health insurance, many employees aren’t even close to being well-prepared given the expected cost of injury and illness. The study found that over half of today’s workforce may face a financial crisis should illness, injury or disability strike.

» Nearly 3 in 5 (59 percent) say they wouldn’t be able to adjust to the large financial costs associated with a serious injury or illness.

» A full 65 percent of employees have less than $1,000 to pay out-of-pocket expenses associated with an unexpected serious illness or accident that occurred today.

The youngest employees are least likely to have savings for a rainy day. Additionally, the report found that younger workers may not utilize the benefits that they do have. Generation Z and millennials were most likely to say they’ve avoided going to the doctor, put off a medical procedure or have been distracted at work by a personal issue. And although higher-earning employees fare better than those making less, many still report not having significant savings to pay for unexpected medical expenses.

Generation Z and millennials are more likely to say they’ve done the following in the last 12 months:

- Avoided going to the doctor
- Been distracted at work by a personal issue
- Put off a medical procedure longer than they should

![Chart showing percentages of employees who have performed certain actions](chart.png)
How much would you be able to pay for out-of-pocket expenses if an unexpected serious illness or accident occurred today?

**Generation**
- **Generation Z** (18-24): Less than $1,000 - 84%, $1,000-5,000 - 49%, $5,000+ - 28%
- **Millennials** (25-36): Less than $1,000 - 62%, $1,000-5,000 - 38%, $5,000+ - 26%
- **Baby boomers** (52-70): Less than $1,000 - 66%, $1,000-5,000 - 40%, $5,000+ - 32%
- **Silent Generation** (71+): Less than $1,000 - 55%, $1,000-5,000 - 38%, $5,000+ - 32%

**Annual household income**
- Less than $50K: 54%
- $50-$99.9K: 26%
- $100K+: 11%

**Region**
- **Northeast**: 63%
- **South**: 69%
- **West**: 60%
- **Midwest**: 66%

**Business size**
- <50 employees: 66%
- 50-249 employees: 71%
- 250-999 employees: 65%
- 1,000-4,999 employees: 57%
- 5,000+ employees: 64%

**Out-of-pocket costs and risks**

**Cancer**
- Nearly 1.7 million Americans were expected to be diagnosed with cancer in 2015. 6
- A Duke University Medical Center study found that the average monthly out-of-pocket cost for older cancer patients insured privately, through Medicare or both is $1,266. 6

**Heart attack**
- The average hospital stay and related expenses for a heart attack is five days, adding up to $21,500 – of which individuals with insurance can expect to be responsible for 10 to 20 percent ($2,150- $4,300). 7

**Disability**
- Just over 1 in 4 of today’s 20-year-olds will become disabled before reaching age 67. 8
- 1 in 8 workers will be disabled for five years or more during their working careers. 9

---

6
Employees want more money—and benefits

Everybody knows that money talks, but employees say there’s something else that can sweeten the pot—benefits. Though most employees say increasing their salaries is one thing that will keep them in their jobs, it’s clear that benefits are also playing an important role in recruitment and retention:

» **60 percent** of employees are likely to take a job with lower pay but better benefits.

» **2 in 5 employees (42 percent)** say improving their benefits package is one thing their employers could do to keep them in their jobs; it’s the second most mentioned after “increase my salary” and is a higher proportion than those that mentioned a promotion.

» **16 percent** have left a job or turned down a job in the last 12 months due to the benefits offered.

The best retention strategies vary by life stage, but salary increases and benefits top everyone’s lists.

Which of the following, if any, could your employer do to keep you in your job?
Benefits may boost employee satisfaction and keep them healthier

The report found a disconnect between the benefits employers are offering and the benefits employees want and need.

One-third of employees (33 percent) said they are only somewhat satisfied with their benefits. Similarly, 29 percent said their benefits meet their families’ needs only “somewhat well.” 10 percent said their benefits don’t meet their needs. 70

Yet, when employers get benefits right, there’s a clear advantage. Compared to those who aren’t satisfied, employees who are satisfied with their benefits are: 11

» More likely to be satisfied with their jobs (96 percent vs. 68 percent). 12

» Less likely to look for a job in the next 12 months (46 percent vs. 57 percent). 1

» Less likely to avoid going to the doctor (22 percent vs. 45 percent).

» Less likely to have been distracted at work by a personal issue (23 percent vs. 33 percent).

» Less likely to put off a medical procedure longer than they should (16 percent vs. 30 percent).

Substance matters: Employees are concerned about cost when it comes to their benefits, but many aren’t willing to sacrifice quality. They most frequently named “overall value of the plans for the price paid” as most important to their satisfaction with health insurance and benefits providers. Employees are also more likely to say they expect their employers to offer different types of benefits, compared to the views of employers. But over half (57 percent) say that if their employer didn’t provide adequate health insurance, they would purchase additional, affordable products to ensure their coverage was adequate.

Employees expect more from their benefit packages:

<table>
<thead>
<tr>

<td>68%</td>
</tr>
<tr>
<td>Life</td>
<td>59%</td>
</tr>
<tr>
<td>Disability</td>
<td>64%</td>
</tr>
<tr>
<td>Voluntary</td>
<td>27%</td>
</tr>
</tbody>
</table>
What are employees saying about voluntary benefits?

Voluntary insurance includes supplemental life, disability, critical illness, hospital, accident, cancer insurance and much more. These insurance products pay policyholders cash benefits when they are sick or injured, and are usually bought through an employee’s workplace. Nearly 4 in 5 employees (79 percent) see a growing need for voluntary insurance today compared to last year. And of those, 60 percent say it’s because of the rising cost of medical services. Employees who were offered voluntary benefits at work reported higher levels of satisfaction with their jobs and their benefits.

Employees offered and enrolled in voluntary benefits are more likely to be:

- Prepared to pay out-of-pocket expenses not covered by major medical/health insurance
- Satisfied with their jobs
- Satisfied with their benefits

<table>
<thead>
<tr>

<tr>
<td>Not offered voluntary through employer</td>
<td>39%</td>
</tr>
</tbody>
</table>
What are employees saying about wellness programs?

Sixty-one percent of employees agree that they’ve made healthier lifestyle choices because of their company’s wellness program. Additionally, the study found that employees who participate in wellness programs offered at their workplaces have higher satisfaction levels.

Employees who participate in their companies’ wellness programs are more likely to be:

- Satisfied with their jobs
- Satisfied with their overall benefits package

![Chart showing satisfaction levels for participation and non-participation in wellness programs.]

Though small employers are less likely to offer wellness programs, when they do, their employees are at least as likely to participate and more likely to say it has helped than larger firms.

What are employees saying about high-deductible health plans?

Sixteen percent of employees are enrolled in a health plan with an annual deductible of at least $1,000. Though employees enrolled in HDHPs may be more likely to be knowledgeable about consumer-driven health plan options, they also reveal a few drawbacks. Employees enrolled in HDHPs are:

Less likely to say:

- They’re satisfied with their jobs
- They’re satisfied with their benefits
- Their benefits meet their families’ needs

More likely to say in the last 12 months they’ve:

- Avoided going to the doctor.
- Been distracted at work by a personal issue.
- Put off a medical procedure longer than they should.

About the study

The 2016 Aflac WorkForces Report is the sixth annual Aflac employee benefits study examining benefits trends and attitudes. The study captured responses from 1,500 benefits decision-makers and 5,000 employees across the United States in various industries.

The Employer Survey was conducted online within the United States between Jan. 11, 2016, and Feb. 11, 2016, among 1,500 benefits decision-makers at companies with at least three employees. Results were weighted to enable year-over-year trending. No estimates of theoretical sampling error can be calculated; a full methodology is available.

The Employee Survey was conducted online within the United States between Jan. 20, 2016, and Feb. 3, 2016, among 5,000 adults ages 18 and older who are employed full or part time at a company with three or more employees and not retired. Results were weighted to match U.S. demographics. No theoretical sampling error can be calculated; a full methodology is available.

The 2016 Aflac WorkForces Report survey was conducted by Lightspeed/GMI on behalf of Aflac.
