

# Children's sports injuries affect the entire family

As the snow melts and the grass grows greener, spring flowers aren't the only thing captivating your employees. Those with children are cheering on their kids from the sidelines as they participate in Little League and other spring sports, such as track and field, golf and lacrosse. But even on the brightest of days, it doesn't take much for your employees to go from experiencing sunshine and rainbows to a financial thunderstorm.

## Spring weather can cause an uptick in unexpected sports injuries

It's natural for parents to worry about the possibility of their young athletes being injured. Every year, more than 2 million high school athletes are treated for sports injuries. Younger kids aren't immune, either. In fact, children ages 5 to 14, account for nearly 40% of all sports-related injuries treated in hospitals.<sup>1</sup>

Spring brings its own form of injury possibilities. Not only are official spring sports getting underway, but kids in colder climates are brushing off cabin fever, potentially bringing "sports" injuries to casual games at recess. And between the melting snow in March and the April showers that bring May flowers, spring provides fertile soil for sports injuries to take root.

In much of the country, spring means harsh weather with colder temperatures that can create difficult conditions for athletes. Pair this with slick spots around the baseball diamond or on the running track, and you have an abundance of accidents waiting to happen. And contrary to what some may believe, a sport doesn't need to be as high-contact as football to sideline players with injuries.

More than 116,000 youth baseball and softball injuries are seen in U.S. emergency departments annually.<sup>1</sup> And at least 50% of regular runners get hurt each year.<sup>2</sup> With the role the elements play in athletes' functioning, no sport is injury-proof — [not even golf](#). Accidents can be as unpredictable as the weather.

## There's the sticker price, and then there's the actual cost

It's no secret that injuries can be costly — for example, even without surgery, it typically costs \$2,500 to treat a broken arm.<sup>3</sup> Sports-specific injuries can take things to the extreme. Consider injuries of the ACL. Ranging from minor sprains to full tears,<sup>4</sup> ACL injuries are one of the more common types of knee injuries. And in the event of a tear — a particular risk to female athletes, who are six times more likely than male athletes to experience one, surgery is often required.<sup>5</sup> Despite being a fairly common procedure, the national average price of ACL reconstruction surgery is \$15,445, but it can exceed \$90,000 depending on where you live.<sup>6</sup> While health insurance may cover a large part of the costs, it was never designed to cover it all — and it can leave families with high, unexpected out-of-pocket expenses, affecting their overall financial health.

Yet procedures are only one part of the actual cost to an athlete's family. Between follow-up appointments, ongoing treatments and travel back and forth for physical therapy, parents often have to sacrifice their time and juggle their schedules to care for their child. It may be a noble sacrifice, but it can bring crippling [financial stress](#).

These hidden costs exist for any type of injury. Beyond ACL tears, sprains, stress fractures, concussions and muscle strains are among the most common sports injuries in children,<sup>7</sup> and all require either physical therapy or someone to monitor the patient — sometimes both. Offering health insurance that covers some of the costs isn't enough. Without offering supplemental benefits, your employees' financial security is at risk as they may face unexpected medical debt.

Just as they support their children's sports endeavors, parents may need support when their child suffers a sports injury. And rooting them on from the stands isn't going to cut it.

### **Your role: lowering the financial risk**

As an employer, you are uniquely positioned to help safeguard your employees from paying the full cost of their children's sports injuries. A supplement to any primary insurance coverage you may provide, [Aflac's accident insurance](#) will pay your employees a cash benefit to help with any out-of-pocket expenses such as copayments for visits, deductibles or time missed from work.

By offering supplemental accident insurance, you're arming employees with protection that helps them better focus on their children's sports events, and less on the financial harm from a sudden, unexpected injury.
